Richard, This is a server folder permissions issue.

the folder admin/mysql is probably owned by root or whomever you uploaded as. It needs to be owned by the user, the owner of the site.

```
chown someusername:someusername mysql
```

if you are in ssh or putty and do an ls -l you'll see

```
drwxr-xr-x 8 root root 4096 Oct 30 08:06 mysql
```

if that is the case then do the chown as above, or just re-upload the mysql folder as the user rather than root.

This is absolutely Brilliant!!! 😄

Look really professional and well set out

Richard, a cue:

I think key are **users of MySQL...** in my case, only root user could access to DB... And we are inside moodle, as admin, trying to access to Mysql DB, which maybe don't recognize it like its own root user or one of its users...  
Good luck!
