

Overview of Running Instructions

Documentation included in the Conformance application pack

This table of documents describes all the necessary steps to get Moodle running and to execute the SCORM 1.2.7 Self Run TestSuite successfully, along with the necessary application forms:

README.1st.pdf	This document, to be read first. Describes what the different files in the package are
Moodle – Setup Instructions.pdf	Document that walks the user through installing and configuring Moodle for use during testing.
Moodle – Course Instructions.pdf	
FORM001.doc	Completed SCORM Conformance Registration Agreement
FORM002a.doc	Completed LMS Conformance Testing Information Form
MoodleWindowsInstaller-latest-19.zip	A copy of Moodle that is the same as the one used during the documented testing.
Outcome Logs [<i>directory</i>]	A directory containing the HTML logs that were output by the Test Suite during/after testing. TestLog_7_6_108.htm is the HTML displayed to the user during testing with test progress, and final outcome. 20097610112_LMSRTE_Log.htm is the detailed HTML log produced during testing

Additional documentation is available from http://docs.moodle.org/en/Complete_install_packages_for_Windows.

Obtaining the Software

A complete installer for windows is included in the file MoodleWindowsInstaller-latest-1.9.zip. This contains the Apache2 web server, MySQL database, PHP runtime environment, and the Moodle software. This does not need to be installed – it runs self contained from the directory of unpacking.

Updates of the software are available at <http://download.moodle.org/windows/>.
