

I did an overriding in site context for course creator, to allow all capabilities in the section "moodle/category".

Kursbereiche anlegen moodle/category:create	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Kursbereiche löschen moodle/category:delete	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Kursbereiche aktualisieren moodle/category:update	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Verborgene Kursbereiche sehen moodle/category:visibility	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>
Kurse anlegen moodle/course:create	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

I created the category "Testbereich" and assigned the role "course creator" to "moodle tester1"

Roles	Description	Users	
Administrator/in	Administrator/innen haben normalerweise alle Rechte auf der Website und in allen Kursen.	0	
Kursverwalter/in	Kursverwalter/innen dürfen neue Kurse anlegen und in ihnen unterrichten.	1	moodle tester1
Trainer/in	Trainer/innen dürfen in einem Kurs alles tun, incl. der Veränderung von Aktivitäten und der Beurteilung von Teilnehmer/innen.	0	

My understanding is now:

Due to the overriding in site context the permissions to create, delete, etc. are granted to my testuser.

When I login with the testuser I will get the following:

[illegible]

Now I click on “save changes” the page is posted to the server ... and then I get the following:

Add new category

Parent category: Testbereich

Category name*: subtest

Description ?

Trebuchet 1 (8 pt) Lang B I U S x x [Rich Text Editor Icons]

subtest

Path: body

No subcategory is created.

Although the server gets the “Post” Information:

```
77.191.64.4 www.moodlelearning.de - [12/Mar/2008:08:19:37 +0000] "POST
/course/editcategory.php HTTP/1.1" 200 3906
"http://www.moodlelearning.de/course/editcategory.php" "Mozilla/5.0 (Windows; U; Windows NT
6.0; de; rv:1.8.1.12) Gecko/20080201 Firefox/2.0.0.12"
```

The debugging (level all) says nothing about that.

My next step was an additionally assigning the capabilities by an override on the level of category “Testbereich” to the “course creator”. In my understanding of the role concept this is not necessary, because the permissions were still given by the parent site context. But I did it for testing purposes.

The result was the same like before.
