

Brand-new Installation (1.9.8+)

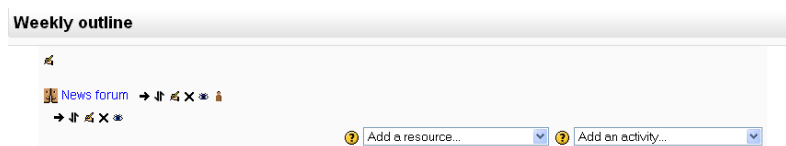

Issue: Japanese text (along with special characters) that is entered is filtered out somewhere between the database and the browser. This happens both ways: when inputting data and when displaying it.

Action: Label Creation

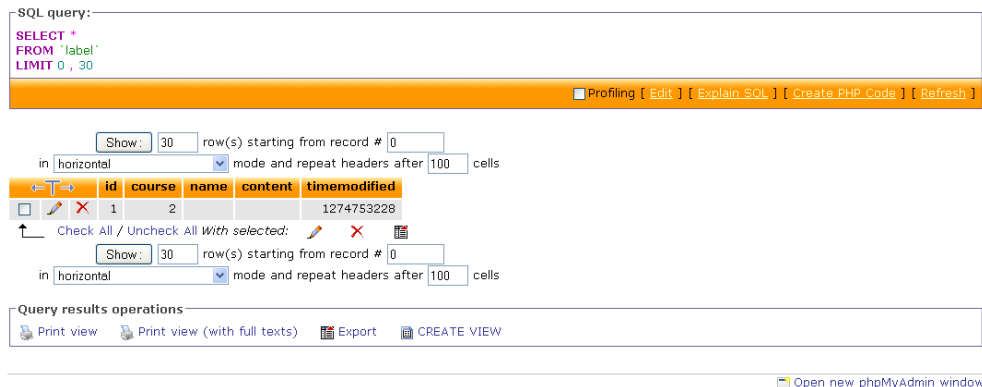

Japanese is entered in the WYSIWYG editor

As soon as “Save and Return to Course” is clicked, the text is filtered out. It is not displayed.

It also does not appear in the MySQL database.

However, I can directly input Japanese into the MySQL database.

MySQL Information

The collations are all utf_general_ci.

localhost

 Server version: 5.0.45

- Protocol version: 10
- Server: Localhost via UNIX socket
- User: x301067@localhost
