Well done!

Checks code against some aspects of the [Moodle coding guidelines](#).

Enter a path relative to the Moodle code root, for example:
local/codechecker.

You can enter either a specific PHP file, or to a folder to check all the files it contains.

To exclude files, a comma separated list of substr matching paths can be used, for example: db, backup/*1, *lib*. Asterisks are allowed as wildchars at any place.

Path to check

/course/format/topics

Exclude

☒ Include warnings

Check code
